National Fire Protection Association Hazard Classification

Health: 0 Flammability: 1 Reactivity: 0 Special Hazards: None

National Fire Protection Association (NFPA) hazard ratings are designed for use by emergency response personnel to address the hazards that are presented by short term, acute exposure to a material under conditions of fire, spill, or similar emergencies. Hazard ratings are primarily based on the inherent physical and toxic properties of the material but also include the toxic properties of combustion or decomposition products that are known to be generated in significant quantities.

DISCLAIMER: The information and recommendations presented in this SDS are based on sources believed to be accurate. The information given is designed only as a guide for safe handling, use, processing, transportation, and disposal and is not to be considered as a warranty or a guarantee of quality. The information relates only to the specific material designated and may not be valid for the material used in combination with other materials. It is the user's responsibility to determine the suitability of the information for their particular purpose.
